EDRS PRICE	MF-$0.65 HC-$13.16
DESCRIPTORS	College Students; Community Colleges; *Educational Research; *Higher Education; *Institutional Research; *Junior Colleges; *Student Characteristics

ABSTRACT

In the fall of 1971, a survey instrument calling for respondents to give basic data about themselves (race, sex, age), to indicate their educational status (class in college), to report their long-range educational plans, and to give other related information was administered to entering students in the public junior colleges and community colleges throughout Florida. A copy of a printout of the survey results for each of the participating 2-year institutions was forwarded to the institutions in early 1972. Following the dissemination of the printouts, questionnaire responses for the total number of respondents in the participating institutions were analyzed according to sex, race, age, and other factors. This volume contains these analyses. (Author/HS)

PREFACE

In the fall of 1971, a survey instrument calling for respondents to give basic data about themselves (race, sex, age), to indicate their educational status (class in college), to report their long-range educational plans, and to give other related information was administered in the public junior colleges and community colleges throughout Florida to entering students. In some institutions, all or nearly all of the students participated in the survey; in other institutions, a sample of entering students was selected to take part in the survey.

A copy of a print-out of the survey results for each of the participating two-year institutions was forwarded to the institutions in early 1971. Following the dissemination of the print-outs, questionnaire responses for the total number of respondents in the participating institutions were analyzed according to sex, race, age, and other factors. This volume contains these analyses.

Two companion volumes were prepared, one reporting the survey results and analyses for the public universities, and the other reporting similar information for private colleges and universities in Florida.

The results of the fall 1971 survey reported in this volume give a cross-sectional picture of students entering the public two-year colleges in Florida for that year. In using the volume, one should keep in mind that the total number of students in the survey does not represent the total number of students entering the public two-year institutions in the fall of 1971. The number of students in the survey represents a substantial proportion of entering students, however, and therefore the percentage of responses to each item can be taken as indicative of the responses of the total population of students entering the public junior colleges and community colleges in the fall of 1971.

This volume is the last in the series of published results of the survey sponsored by the Office of the Florida Board of Regents, titled "Characteristics of Entering Freshmen and Transfer Undergraduate Students." This series, begun in 1966, collected data from students entering Florida's colleges and universities during the period of the most rapid expansion in the state's history. These volumes mirror the group changes in the students' characteristics and should be useful as basic references for some years to come.
